Vision Statement

GTA'5 Cellular Phone

Cell Phone Hacking

Shadow Hacker Group

In designing the *GTA Online Spy Satellite DLC*, a few potential optimizations were discovered. The optimizations in this document use the in-game cell phone that is provided to the players. The players in GTA Online use the in-game cell phone to progress through the game in both GTA Online and GTA 5, respectively. The GTA 5 cellular phone is shown on the left as an image.

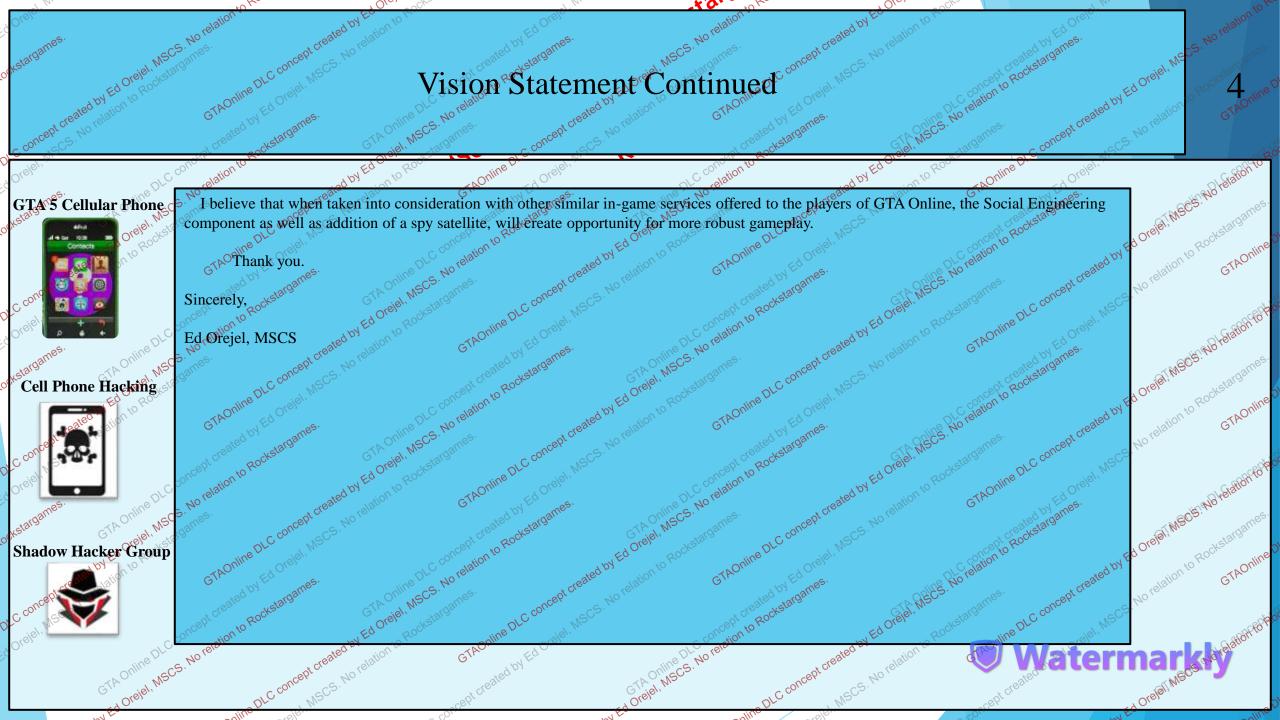

The cell phone optimizations that were created with the GTA Online Spy Satellite DLC use the player's cell phone in different ways to create new gameplay concepts in GTA Online.

The potential gameplay concepts are found in this document. They are provided to the players as a service from the Shadow Hacker Group, with the use of a spy satellite. The central assumption in creating the GTA Online Spy Satellite DLC, and the Social Engineering component, is that the Shadow Hacker Group can use the spy satellite and spying technology, to track what the player does because the player has a cellular telephone.

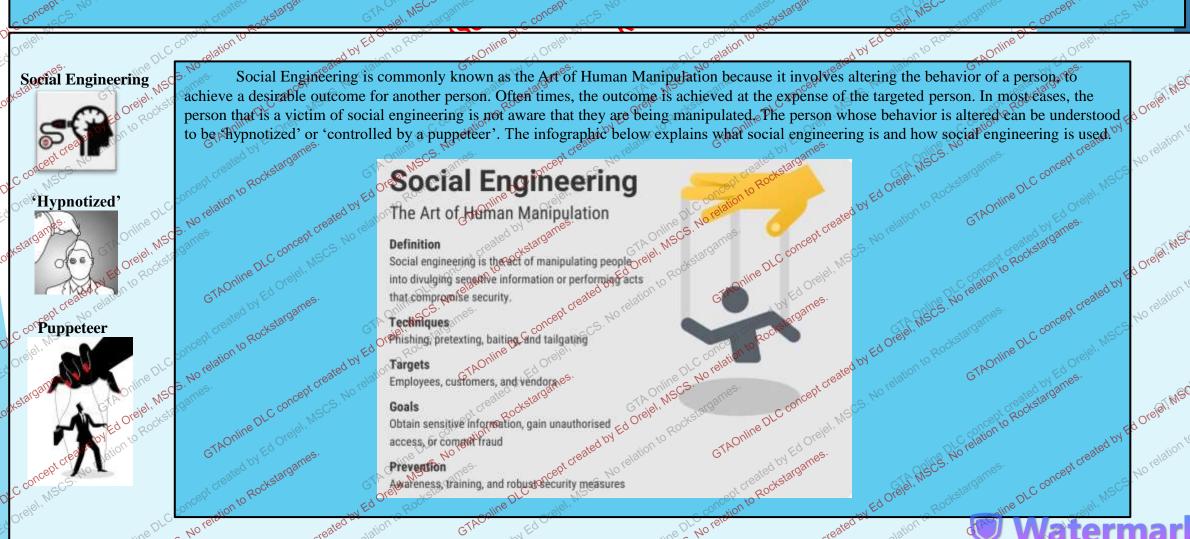

Some components might already be in GTA Online, but they do not use the player's cell phone in their operations. Enabling a spy satellite in GTA Online, and creating a direct link to the player's in-game cell phone, would allow the Shadow Hacker Group, through the spy satellite, to perform new operations involving the player's cell phone and other in-game concepts.

The new operations are found in this document as components. Some of the components would require new systems to be created, so that they may be made available to the player as the players use the spy satellite. The Shadow Hacker Group will only operate through the spy satellite.

ĽSPD

Standard Social Engineering

The Social Engineering Component is subdivided into the following sub-subcomponents

- Snitching a player will be the victim of a snitch.
 - 1. Performed using a police, jailhouse, or prison informant.
- Swatting a player will targeted for swatting
 - 1. Performed using the LSPD SWAT team.
- 3. Standard Social Engineering a player will be targeted for social engineering.
 - The targeted player will be 'hypnotized' with a sense of confusion' or a 'sense of being madly in love'.
 - Hypnosis will be performed using Vanilla Unicorn employees, random NPCs, or other related personal cellular phone contact of the player.

At Social Engineering attacks are performed by the Shadow Hacker Group through the spy satellite.

Random NPCs Ingame Activities

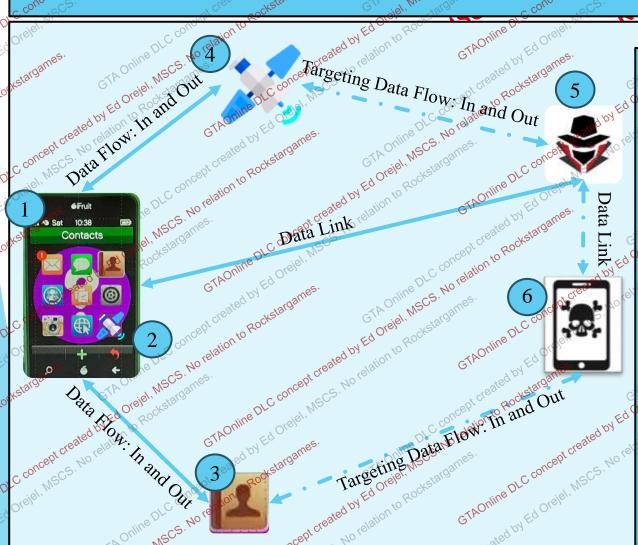

Lost in Love

The Social Engineering subcomponent of 'Lost in Love' can be performed by NPCs in the following manner:

- 1. The 'Lost in Love' social engineering can also be performed by other player contacts whom the player has interacted with while playing GTA Online and performing certain in-game activities.
 - The "certain in-game" activities referred to are those activities that a player in GTA Online tries to perform on various street corners throughout San Andreas. The "certain in-game" activities require picking up a stranger in the player's own personal vehicle. However, if the player uses the wrong vehicle to pick up the stranger, the player receives an in-game message indicating that the activity cannot be performed with the current vehicle that is being driven.
- The madly in love effects' would be simulated by Rockstar Developers similar to how they simulate the in-game effects of being drunk or high.
 - The ideal in-game effects immobilize' the player, making the player 'lose situational awareness'.
 - Other visual effects of being 'madly in love' would be created so that other players can see that another player has been targeted with 'Lost in Love' social engineering, by the Shadow Hacker Group.
 - 3. A system-wide in-game alert could also be sent to the free roam lobby players, indicating that a player has been targeted with a Social Engineering attack, by the Shadow Hacker Group.

Hacker Services — Hacking Services — Cell Phone Hacking Services

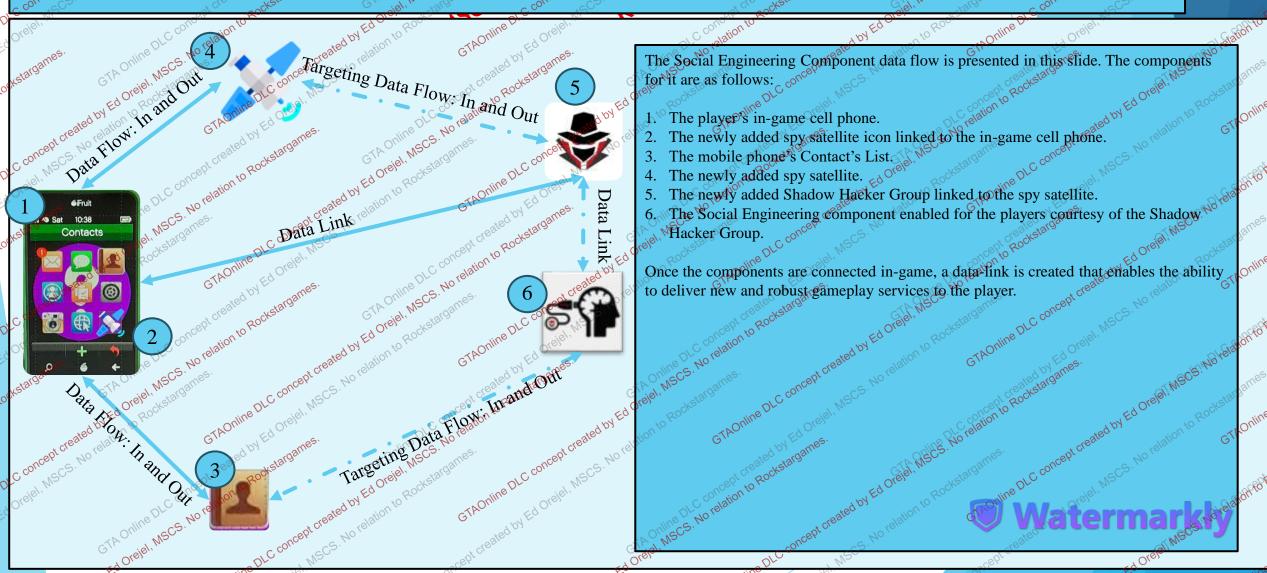

The Social Engineering Component data flow is presented in this slide. The components for it are as follows:

- I. The player's in-game cell phone.
- 2. The newly added spy satellite icon linked to the in-game cell phone.
- 3. The mobile phone's Contact's List.
- 4. The newly added spy satellite. 200
- 5. The newly added Shadow Hacker Group linked to the spy satellite.
- 6. The Shadow Hacker Group will be able to hack the player's in game cellular phone.
 6.1. The Shadow Hacker will have access to the (3) Contact's List of player.

Once the components are connected in-game, a data-link is created that enables the ability to deliver new and robust gameplay services to the player.
